

E-Commerce Product Performance Report

This analysis evaluates product performance, inventory health, and pricing effectiveness across the platform. The goal is to identify strong and weak brands and categories, spot out-of-stock or underperforming products, and recommend actions to improve overall business performance.

15-POINT ANALYSIS

INVENTORY · PRICING · ENGAGEMENT

Made with GAMMA

Top 10 Products by Popularity Score

Premium tech brands (Sony, Apple, Dell, OnePlus) and major footwear/apparel brands dominate customer interest. **8 out of 10 top products are Out of Stock or Limited Stock** — signaling major potential revenue loss.

⚠️ Severe Supply Risk

8 of 10 top items are out of stock or limited, risking significant revenue loss.

📦 Urgent Replenishment

Prioritize restocking Wildcraft, OnePlus, Sony, and Apple immediately to capture unmet demand.

📉 Pause Ad Spend

Temporarily reduce marketing spend on out-of-stock items to prevent wasted ad budget.

Top 10 Products by Review Count & Rating

By Review Count

iPhone 13 and H&M Sweatshirt appear multiple times — high-velocity items with large, active user bases. All top 10 products are tightly clustered between **4,971 and 5,000 reviews**, indicating consistent high consumer interaction.

- Run sentiment analysis to identify pain points or praise
- Leverage social proof ("Join 5,000+ satisfied customers") to boost newer items

By Rating (Min. Review Threshold)

These elite products hold a **perfect 5.0 rating with thousands of reviews** — indicating extreme product-market fit. Wildcraft backpacks dominate this category, but half their top-rated variants are currently unpurchasable.

- Aggressively guard stock of these conversion engines
- Tag with "Top Rated" badges to capitalize on unblemished approval scores

Brand Performance & Stock Distribution

Dell leads customer satisfaction (4.21), while **Zara and Levi's** command the highest engagement and popularity scores. However, **Adidas (83 items OOS)** and **Wildcraft (53 items OOS)** face severe operational bottlenecks. Apple and OnePlus also have more items out of stock than available.

Supplier SLA Enforcement

Impose stricter fulfillment SLA metrics on Adidas, Wildcraft, and Apple to reduce their high share of out-of-stock items.

Capitalize on Fashion Traffic

Increase promotional focus on Zara and Levi's — they naturally generate the highest user traction and interaction metrics.

Category & Subcategory Performance

Category Insights

Fashion is the most popular category (avg. popularity 10,712.11) despite the lowest transaction value. **Electronics** carries the highest average price and steepest discount (~39.71%), indicating heavy reliance on promotions.

- Reduce Fashion's 39.19% avg. discount to recover margins
- Bundle Accessories with Electronics to increase AOV

Subcategory Insights

Smartphones and Sneakers each accumulated nearly 600,000 total reviews — the highest purchase volumes on the platform.

Hoodies rank 8th in popularity but hold the **highest satisfaction score (4.27)**. **Running Shoes** sit at the bottom with the lowest rating (4.00), signaling quality or sizing issues.

- Ensure flawless UX for Smartphones and Sneakers — core traffic drivers
- Audit Running Shoes vendors to identify low-rating sources

High Price + Low Popularity & High Discount + Low Rating

🚧 High Price, Low Popularity

Entirely Electronics. OnePlus 11 (₹77,671, popularity 836.60) and iPhone 13 (₹74,255, popularity 792.00) are practically invisible. Boat Earbuds listed at ₹73,000+ — likely pricing errors.

Actions: Flash discounts on low-performing variants; audit listing pricing inconsistencies.

▼ High Discount, Low Rating

Products hold a flat **3.2 rating** despite 55–70% discounts. iPhone 13 at 61% off (₹73,717) and Samsung S21 at 64% off (₹45,056) risk high return rates.

Actions: Pause algorithmic promotion; conduct quality audits; relabel as "Clearance/As-Is" to protect brand equity.

Out-of-Stock High-Demand Products & Brand Stockout Rates

OOS High-Demand Products

iPhone 13, OnePlus 11, Wildcraft Backpack, and Sony Headphones combine **popularity scores over 21,000** with **4,000+ reviews** — organic search traffic is landing on dead ends. Systemic stockouts span entire high-performing product lines.

- Deploy "Notify Me" and backorder widgets to retain customer intent
- Establish priority replenishment flags for these 17 high-traffic items

Brands with Highest OOS Share

Zara and Adidas have over **40% of their catalogs unavailable**. Premium tech brands (OnePlus, Samsung, Apple) have roughly **1 in 3 products** on out-of-stock pages.

- Enforce OOS penalties or limit promo visibility above 30% threshold
- Automate reorder lead times with tech distribution channels

Monthly Product Additions & New High Performers

Monthly Catalog Expansion

Footwear shows aggressive growth, peaking at **29 new additions in August 2024**. **Accessories** maintains a stable baseline (~23–25 items/month). **Fashion** is volatile, dipping to 14 additions in July.

- Sync marketing campaigns with inventory influxes (e.g., scale Footwear marketing in late August)
- Offer seller fee discounts during low-upload months (like July) to stabilize catalog growth

New Products Already Winning

Adidas Ultraboost and **Levi's Jeans** achieved perfect 5.0 ratings with top-tier popularity shortly after launch. High-ticket items (HP Pavilion, iPhone 13) show 4.9–5.0 trends — strong introductory momentum.

- Establish dedicated reorder cycles to prevent early stock depletion
- Feature in "New Arrivals & Fan Favorites" homepage carousels

Biggest Price Gaps, Weakest Ratings & Brand Inconsistency

Biggest Price Gaps

High-end electronics face absolute cuts of **₹47,000–₹55,000**. Boat Earbuds show inflated baseline prices (~₹75,153) to display massive discount gaps. Audit HP Pavilion and Dell margins; create a "Mega Deals" homepage section.

Weakest Category Ratings

Footwear has the lowest avg. rating (4.03) across 490 products — signaling sizing or quality issues. All categories cluster tightly (4.03–4.13); no clear "gold standard." Deploy sizing intelligence widgets; purge sub-3.5 sellers.

Brand Best vs. Worst

Apple, Samsung, and Sony show the **same product name** at both 5.0 and 3.2/3.3 ratings — issues are at the **seller/variant level**, not brand level. Best products hit 5.0; worst bottom out at 3.2–3.3 consistently. Drill into SKU/seller IDs to isolate problematic listings.

Conclusion & Strategic Priorities

The platform's main challenge is ensuring high-demand items remain **available, appropriately priced, and supported by consistent inventory planning**. Stock shortages and pricing imbalances are limiting full business potential.

01

Restock High Performers

Prioritize replenishment for Wildcraft, OnePlus, Sony, Apple, and Adidas — the highest-demand, highest-revenue items currently lost to stockouts.

03

Focus Marketing on Winners

Amplify Zara, Levi's, Hoodies, and new high-performers. Sync campaigns with catalog upload peaks and protect top-rated SKUs with badges and priority placement.

02

Refine Pricing & Discounts

Reduce Fashion discounts to recover margins, audit Electronics pricing errors, and relabel high-discount/low-rating items as clearance.
